

Decentralized Volunteering Protocol DeVo Will Redefine Volunteerism

OVERVIEW

PROBLEM

- Centralized nature of the non-profit sector has created immense issues for volunteers, volunteer organizations, marginalized groups, and donors.
- Funds can't be tracked, responses are mismanaged, volunteers feel unappreciated, and people in need do not receive the care they deserve and that donors expect.

MISSION

- Provide Volunteers, Charities, Organizations, Donors, and those in need with help through a perpetually funded & fully Decentralized Organization.

SUMMARY

- DeVo Protocol is a new decentralized ecosystem designed to facilitate trust-based interactions between volunteers, organizations, and marginalized groups in need.
- Achieved through a Decentralized Autonomous Organization (DAO), DeFi, and NFTs.
- DeVo funds and rewards altruistic efforts through proven state-of-the-art blockchain architecture.
- DeVo leverages pre-audited and upgradeable smart contracts to build a highly secure protocol that is adaptable to the ever-evolving blockchain space.

HOW WILL DEVO REDEFINE VOLUNTEERISM

VOLUNTEERS

- Volunteers make up the majority of non-profit organizations but are the least represented and often feel unappreciated.
- DeVo creates a unique identification and authentication process verifiable on a transparent blockchain. Their identifier will receive non-transferable NFT badges after completing volunteer work for a DAO-approved volunteer organization.
- DeVo increases the discoverability of talented volunteers and allows them to be rewarded for their work.

VOLUNTEER ORGANIZATIONS

- Volunteer Organizations (VOs) have trouble sourcing donations, finding properly skilled volunteers, and providing logistical responses to adversities.
- DeVo offers VOs funding via perpetual donations.
- DeVo provides access to verified and qualified volunteers in order to quickly identify and onboard the best volunteers for a mission.
- DeVo leads to more funds and focus towards those in need and less on traditional administrative constraints.

MARGINALIZED GROUPS

- Much of the efforts and donations that are intended for marginalized groups are consumed by administrative costs. These groups have limited to no voice in the care they are receiving, leading to mismanagement of needs and ineffective support.
- DeVo will utilize unique yet anonymous verification methods to identify these individuals, connect them with volunteers as well as VO's, and provide them a meaningful voice in the caregiving process.
- DeVo increases the transparency of Volunteer Organization resource allocation, resulting in a high level of accountability and responsible spending, leading to marginalized groups receiving optimal care and donors assured that their funds are being utilized effectively.

DONORS

- With only a fraction of the funds donated being delivered to those in need, it can be difficult for donors to trust that their donations are being utilized efficiently.
- DeVo affords donors unparalleled access and clarity to the caregiving process and how their funds are used to accomplish altruistic efforts. Public proposals and transactions provide clarity and control regarding where money is being spent.
- Historically, every dollar donated was only utilized once. Using advanced staking mechanisms, donations through the DeVo network are perpetual and continue to benefit those in need long after being donated.

GET YOUR TOKENS

HOW TO GET TOKENS

Get your tokens by clicking on the following link: <https://www.devoprotocol.org>

As a token holder, you will become a DAO Founder and be able to progress DeVo's vision with initial funding and proposal voting.
